Academic Qualifications (Beginning with the most recent)

Date	Academic Degree	Specialty	Address
October 2013	PhD	Pharmacy Practice	University College London/UCL School of Pharmacy, UK
October 2008	MSc	Clinical Pharmacy	University of Strathclyde, UK
2004	BScPharm	Pharmaceutical Sciences	King Saud University

PhD, Master or Fellowship Research Title: (Academic Honors or Distinctions)

PhD	Factors Influencing Weight Gain in Young People Treated with Antipsychotics
Master	Evaluation of Teachers' Perceptions of Patient Centred Teaching and the Development of Teaching and Learning Guidelines

Professional Record: (Beginning with the most recent)

Job Rank	Place and Address of Work	Date
Associate Professor	Department of Clinical Pharmacy Research, Institute for Research and Medical Consultations, Imam Abdulrahman Bin Faisal University	June 2019
Assistant Professor	Department of Clinical Pharmacy Research, Institute for Research and Medical Consultations, Imam Abdulrahman Bin Faisal University	February 2014
In-patient pharmacist	King Fahd Hospital of the University	2005-2007
Pharmacist	Collage of Dentistry, King Faisal University	2004-2005

Additional Certificate Courses Completed:

Degree	Year	Institute	Remark
NCBE (National Committee for BioEthics) Web-based training course	February 2024	KACST, Saudi Arabia	-
PHRP Online Training, NIH web-based training course "Protecting Human Research Participants"	April 2019	National Institute of Health, USA	Certificate No: 2823890
NCBE (National Committee for BioEthics) Web-based training course	July 2015	KACST, Saudi Arabia	Certificate No: 100382

Pharmacogenomics (CLPH 514)

This course is designed to introduce students to the role of genetics in drug responses and applications to pharmacy practice. The course covers the genetic basis of human genetics and genetic variability in drug response that can contribute to drug efficacy and toxicity, adverse drug reactions and drug-drug interactions. Also included are genomic variations among human beings, web resources for bioinformatics, applications of genomics in human health and complex diseases, pharmacogenomics of drug metabolizing enzymes, pharmacogenomics of drug transporting proteins and drug receptors, pharmacogenetics of drug metabolism and its clinical applications, pharmacogenomics of drug interactions and their adverse effects, cancer pharmacogenomics and pharmacogenomics in drug discovery and development.

Brief Description of Postgraduate Courses Taught: (Course Title – Code: Description)

Course	Description
<p>Research Methods & Scientific Writing</p> <p>MSNE-891 MSBE-891</p>	<p>The aim of this unit is to provide learners with the skills needed to conduct research of sufficient quality and rigor that enables it to be useful for decision making at postgraduate level. It concentrates on the acquisition of key skills, such as writing and presentation, and on research methodologies, bibliographic compilation, quantitative and qualitative analysis. The objectives of the units are to support learners with an introduction to research methodology and independent research skills, key empirical and analytical skills that will facilitate disciplinary and interdisciplinary research. This unit will also help learners in improving their academic writing skills, the ability to give and receive constructive feedback and to act constructively upon it. This unit provides learners with comprehensive knowledge and understanding of methodological issues in research. To understand the type of research such as lab-based, survey research, clinical research, and scientific writing, and be able to know how to write their required proposals, thesis and manuscript.</p>
<p>Part A: Research Ethics</p> <p>MSBE-892 MSNE-892</p>	<p>The Research Ethics Course caters to the increasing need for the scientific community to be accountable to society, given the rising influence, credibility, and integrity of life science research. It focuses on contemporary issues and obstacles in research ethics and scientific integrity, encompassing critical elements such as consent, privacy, data management, authorship, research conduct, fraud, intellectual property, conflicts of interest, and bioethics. The course's primary objective is to equip graduate students with practical guidance and advice to navigate complex ethical questions related to the principles, values, and standards required for conducting research.</p>
