### Brief Description of Undergraduate Courses Taught: (Course Title – Code: Description)

**Foundation of Healthcare System and Pharmacy Practice (PHCH 213).** This course provides a comprehensive overview of pharmacy and its education process as well as its subjects from admissions to advanced training. In addition, students will explore the various aspects of the Saudi Arabian healthcare system, including its organization, structure, financing mechanisms, delivery models, and regulatory frameworks.

**Graduation projects (CLPH 507):** this course provides students with an overview of the variety of research methods used in health research and the skills to determine which research method/s best answer/s their research question. Research challenges, including appropriate selection of design, research participants, sample size, data collection, selection of appropriate measures, data analysis and interpretation of results are studied. It encompasses the understanding of presentation, analysis, interpretation of collected data. It presents an overview of basic uses of descriptive and inferential statistical methods. Students will have opportunities to advance their understanding of data analysis methods required to interpret data collected during the course of the proposed research.

**Pharmacoepidemiology (CLPH 512):** this course covers the importance of pharmacoepidemiology, basic terminology used in pharmacoepidemiology research, and the data sources, study designs, and statistical analyses often employed in pharmacoepidemiology research. The course further covers detailed descriptions of the use of pharmacoepidemiology to understand medication utilization and medication safety issues. Finally, the course discusses the perspective of the FDA on medication safety, the importance of health care professionals to the process of improving medication safety, and the ways in which pharmacoepidemiology will be a key component of future medication safety initiatives.

#### **Communication Skills for Pharmacists (CLPH 411):**

This course is designed to teach the students different techniques of communications with patients, colleagues and other health care providers. This course offers a framework for therapeutic communication based on knowledge taken from theoretical concepts of human communication.

**Therapeutics I (CLPH 405):** the course aims to provide the principles of pharmacotherapy and therapeutics in cardiovascular, hematological and respiratory disorders in terms of the following:

1. Identifying pathophysiology, clinical presentation and diagnosis of the disease,
2. Determining the desired therapeutic outcome,
3. Indicating appropriate management of the disease,
4. Evaluating therapeutic outcomes,
5. Providing patient education.

**Therapeutics II (CLPH 407):** the course aims to provide the principles of pharmacotherapy and therapeutics in endocrine disorders, joints and bones disorders, neurological and psychological disorders in terms of the following:

1. Identifying pathophysiology, clinical presentation and diagnosis of the disease,
2. Determining the desired therapeutic outcome,
3. Indicating appropriate management of the disease,

4. Evaluating therapeutic outcomes,
5. Providing patient education.
