Dean's Message.

It gives me great pleasure and pride to introduce the thesis projects of the graduates of the College of Design. This book is a culmination of a 5-year program that equipped our graduates with skills and technical knowledge of increasing complexity. At the heart of design is a continuous strive to solve problems and improve the lives of others.

This book gives you a small glimpse of what our graduates are capable of by offering vignettes into their graduation projects and selected previous projects.

Thesis projects are the outcomes of an academic year's worth of work that starts with a project of the students' choosing that fits with set criteria. One semester is spent on thorough and detailed research which includes understanding all aspects of the problem, learning from case studies and engaging with stakeholders. In the second semester, this research is applied through design iterations that test and continuously improve the design solutions.

For many, 'Design' is about aesthetics, but that is not our ultimate aim. Design can be used for the betterment of living conditions, creating awareness, or allowing inclusivity. These are only a few of the things that design can achieve. Our aim is to graduate students who can make an impact, do good and are effective in their country's economy.

In 2019, we graduate our first cohort of Industrial Designers and our seventh cohorts of Interior Designers and Graphic Designers. I would like to take this opportunity to thank the faculty of the College for their dedication and hard work in preparing our graduates for their careers. I would also like to congratulate our graduates on their achievement and thank them for their commitment and perseverance. Great things await you!

*Dr. Sumayah Al-Solaiman
Dean, College of Design*

Department of Industrial Design.

The Department of Product Design at the COD is a five-year undergraduate professional degree program leading to a Bachelor of Science in Product Design. Each academic year consists of two semesters. The program is sequenced to provide systematic learning and to reinforce essential concepts as students proceed through the program. The undergraduate curricula in design are divided into two phases, a preparatory year in the Engineering Track that all College of Design students complete in the first year, followed by four years of the core program of study.

Head of Department Message.

Congratulations to the first Industrial Design cohort! We celebrate 4 years since the establishment of the Department in 2015 at college of design at, Imam Abdulrahman Bin Faisal University. We are extremely proud of the countless hours of study and hard work that our students have put into completing the Program. You have the privilege of being the first female Industrial Designer graduates to hold this degree on a national level within the Kingdom of Saudi Arabia.

Final Design Studio projects communicate and contextualize conceptual ideas in an interdisciplinary approach that involves theory, design thinking, user experience, marketing, engineering, 3D modeling, and prototyping. I applaud the work and effort of the Industrial Design faculty who with their commitment to innovation in education, helped prepare graduates with needed skills to excel in their careers and thrive in our society. In particular I would like to thank the Design Studio 10 instructors, Ms. Khadijah AlKhuwaitem, Ms. Norizzah Khan, Ms. Nora Alhumaidi and Ms.Maha AlShathli.

To our graduates I say, it is a great privilege to represent and assist you as the Head of Department, and it's been an honor seeing you grow into what you are today. Take time to remember your college days, looking back on the many changes you have experienced since your graduation day.

Dr. Lina Darweesh
Chair of Product Design Program

Industrial Design Studio 10.

The course allows the examination and application of design processes and methods pertaining to product development to a complex and socially relevant design challenge. Specifically, it requires students to complete the design process including ideation, development, refinement, detailing and final documentation and prototyping stages of the major design project commenced in their thesis, and potentially conducting user tests. In highlight, the course is designed to complete and communicate the industrial design graduation project to a level which demonstrates knowledge gained throughout the whole program and capacity to practice professionally to international standards.

Class of 2019:

Alanoud Alwalmani
Bothaina Alamri
Sarah Alowaid
Akela Alsadiq
Hawra Al Dawood
Fay Aljean
Kaltham Aldoassary

GREEN U

GREEN U is a planting product supported with a rooting system enhancing the planting activity and spreading the action from the home use to create the needed plants diversity in Saudi Arabia .

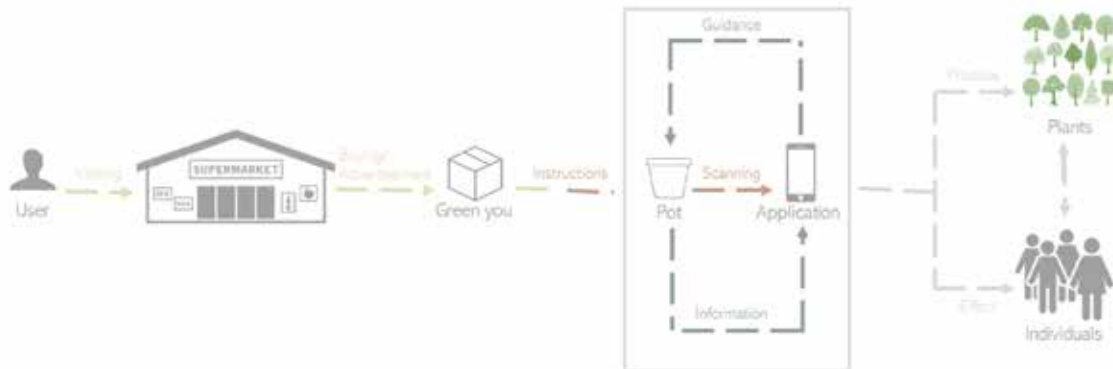

SYSTEM

the goal is to sustain the action for the individual while creating a spreading action through the user experiences and environment effecting friends and family

System design

Before starting

After starting

Product system

Product outcome

Planting resources from the home environment to the home use.

After the planting activity the user can transfer the plant to the garden or give it to someone to start a new planting process

SagaShoe Iron

Inspired from the beach context, SagaShoe Iron is designed for the female to get out more, enhance her health with wearable weights that will add an elegance value to her appearance.

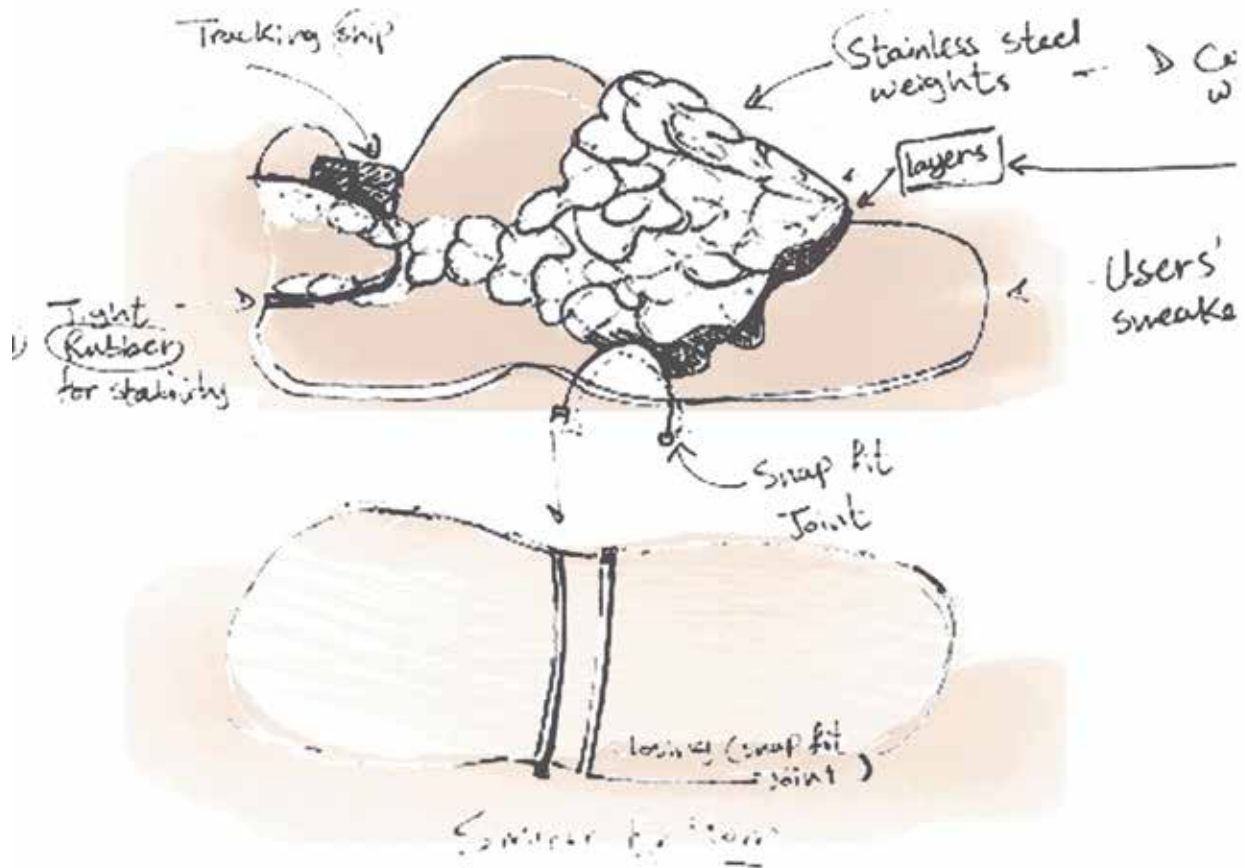

Materials

- 1) Rubber x2
- 2) Stainless steel
- 3) Tracking strip

Joints

- Snap fit

Mechanism
Adding coral like
layer for higher intensity

Akela Alsadiq

Akela.m.542@gmail.com

I Shade

Design a diabetic control system inside the car to reduce the hazard while driver faced hypoglycaemia and the unconscious driver actions.

01 Design in Seat

02 Design in belt

03 Design in paddle

04 Design in steering wheel

IDEATION

Driver measure all way of driving

Sensor feel of health changing

Seat vibrate for driver

Driver moves fast

Petrol paddle respond less

Some one notes a stopped car

Driver passed away

Notice the lighting in seat and help

Driver awake and re turn car

Story Board

Design a steering wheel cover with a hidden PBG system to measure and calculate driver health conditions

Design a steering wheel cover with a hidden PBG system to measure and calculate driver health conditions

Moreless phone

Moreless Is A Modular Phone Made Using Different Components That Can Be Independently Upgraded and Replaced In A Modular Design. Moreless Phone aims To Reduce Electronic Waste, Lower Repair Costs And Increase The Phone Lifespan.

Timeless design concept

The Timeless design concept was inspired by The godfather of industrial design dieter rams who created the ten principles of good timeless design. In late 1970. And his designs are the true meaning of timeless designs most of us are familiar with his design that managed to stay usable until nowadays.
