

## IAU-PMO WORKING METHODOLOGY

The success of the project management system depends on the methodology of communication between the team works in all University programmes and projects and the decision-maker. This is attained by displaying workflow requirements and accomplishment satisfaction rates and by finding a mechanism to implement decisions of feedbacks; one of the most important objectives of which is to keep the project or the program on its original and planned track (Figure 1).

**Figure 1** The success of the system depends on the mechanism of applying the strategies to the minimum level and continuity of feedback to the highest level - the level of decision makers
